THE THUNDER JET ADVANTAGE

- Thunder Jet has a very solid background with years of experience in the welded aluminum industry and is one of North America's leading **All Welded** aluminum boat manufacturers.
- All hulls are constructed using 5086 Marine Grade Aluminum, 5000 Series aluminum alloy which has the greatest resistance to corrosion in the industry. The magnesium alloy combines with the aluminum to enhance the protective properties of the natural oxide.
- All Thunder Jet Boats have a full length, **aggressive, "built in" reverse chine**. The reverse chine increases the boats lift and handling. This is a significant advantage over our competition. Thunder Jet's reverse chine hull provides a quicker hole-shot, shallower draft, less drag [**fuel economy**], better wake and drier ride. Additionally, it **does not allow the rear end to slide**, typical on many conventional welded aluminum hulls using extrusions or welded on chines. Thunder Jet's soft, easy to handle ride is what really sets us aside from our competition.
- **Full Length Box Stringers** are used to reinforce the side to the hull forming part of the floor. The bulkhead further reinforces side to side flex, tying everything together and bracing the floor. The **full length side trays** help to further reinforce the sides. Finally a hull stiffener is used to reinforce and toughen up the bottom.
- The majority of components are **built in house by Thunder Jet** and constructed of marine grade aluminum. This eliminates corrosion that occurs when using dissimilar metals. Stainless steel and aluminum do not mix but many companies use this method as a less expensive way to attach cleats, rails, bow and stern eyes and etc.
- Thunder Jet uses plastic washers under all the stainless steel snaps; this is to reduce the corrosion resulting from the contact of two dissimilar metals.

- **Thunder Jet Welds are quite simply the best in the industry.** We employ the best welders and all welders are ticketed professionals with years of experience in the industry.
- **Fuel tanks are Custom Built** to properly fit with each Thunder Jet Boat. Many companies use jobber tanks that do not fit properly and a good percentage of these tanks are constructed out of plastic to save money. All Thunder Jet fuel tanks are centered in the hull to help balance the boat. These tanks have rubber at all contact points and are vented front and back to allow for easier fueling. You will notice bracing between the fuel tank and the floor to eliminate a soft and spongy floor.
- **All Cleats, Bow and Stern eyes are welded on** to ensure the best possible strength and years of trouble free boating. Many of our competitors use bolt on components or spot welded cleats to save time and money. These components will loosen off or break over time and must be checked on a regular basis.
- **Thru hull fittings and bow drains** on Thunder Jets are welded vs. less expensive bolt thru fittings. This welded process will last a lifetime, looks great and requires no repairs or maintenance.
- **All tops are built by Thunder Jet** to insure the best possible fit and quality. Top rails and hardware are custom built to match every boat and constructed of square tubing to ensure strength and durability. Most boat manufacturer's jobber out their tops and top hardware, unfortunately these tops never fit quite right and the quality suffers.
- **Upholstery is of the best possible quality**, insuring comfortable seating with easy to look after material that will last for years. Box seats are well positioned, offering self adjusting back rests and ample storage. Thunder Jet offers many seating options to help fulfill all your needs.
- All boats come with a premium quality, marine grade battery. **Thunder Jet boats are factory tested and water ready.** Very few other manufacturers go to this expense.
- **Thunder Jet Floors** are constructed of only the **best possible 5/8" marine grade plywood**, with glued on vinyl or carpeted floors with a **lifetime warranty**.
- **A Fuel Water Separator** comes as standard equipment on all Thunder Jet Boats to ensure hours of trouble free boating.

- **A Brass Shut Off Valve** is included when the optional “quick connect” auxiliary fuel line is added.
- **A Grab Rail is standard**, across the top of both forward facing windows and a passenger side grab rail with a drink holder are also included. With any of the ½, ¾ or full hard top models 2 grab rails are conveniently mounted inside, on the roof. This will ensure the **best possible and safest ride** for everyone aboard.
- **All bows are foam filled** to increase floatation and ensure the quietest ride in the industry. Foam is also added into the hull around the stringers and under the floor, this is not standard with many of our competitors building river jet boats.
- **All Thunder Jet Models** less than 20ft have upright floatation, **meeting or exceeding Coast Guard Standards.**
- **The trailers** under Thunder Jets are **Custom Built Titan Trailers.** These trailers are all welded, galvanized and custom built to perfectly match each Thunder Jet Boat. Very few companies go to this kind of expense to ensure the boat travels well, loads and unload easy and look great.
- **Thunder Jet has lots of Standard Features.** **Standard Exterior Colors** are red, white, dark blue, yellow, dark green, maroon and black. **Thunder Jet also has lots of optional features plus optional exterior and interior colors.**
- **All Thunder Jet Boats** have been designed and engineered to provide the best possible ride and deliver better than average fuel efficiency. **All this combined with style and performance make Thunder Jet the best aluminum boat money can buy!!**

***THUNDER JET OWNERS ARE AMONG THE HAPPIEST BOATERS
IN THE INDUSTRY AND WE ARE VERY PLEASED TO OFFER
EVERY CUSTOMER A LIFETIME, TRANSFERABLE HULL
WARRANTY!!***

***PERFORMANCE - VALUE - STYLE
YOUR BOAT --- YOUR WAY!!***
